

Closing Remarks

ALMA at 15 Years

Science, Synergies, and the Road Ahead

February 22 - 26, 2027 / Taipei, Taiwan

Marking the 15th anniversary of the Atacama Large Millimeter/submillimeter Array (ALMA), this conference celebrates a decade and a half of transformative discoveries in astronomy and astrophysics. It will highlight ALMA's latest results, especially since the [last Pan-ALMA conference held in 2023](#), and identify exciting directions for future ALMA research.

The program will feature invited and contributed science presentations, along with updates on the Wideband Sensitivity Upgrade (WSU), tutorial sessions on the archival and CARTA systems, and discussions of future ALMA prospects. Talks and posters presenting scientific work using ALMA and/or its synergies with other facilities across all areas of astronomy are welcome.

Lihwai Lin (SOC)
Wei-Hao Wang (LOC)
